

Use Cases for the Business User

Duration: 1 Day

Course Description

This 1-day course is designed to provide business users with intensive, practical training in the concepts of requirements specification through use cases. During the course, the business users will gain a comprehensive understanding of use cases, how to effectively write and review use cases. They will experience developing the use cases in a group-facilitated environment.

Audience

Business users, business analysts, business and IT managers, and software developers who wish to learn techniques for capturing requirements for software system development.

Prerequisites

No specific prerequisite.
